

Godliness Dongorere

Systems Support Specialist & Software Developer

☎ +268 7934 2380 ✉ gdongorere@gmail.com 🔗 [linkedin.com/in/gdongorere](https://www.linkedin.com/in/gdongorere) 🌐 godliness.vercel.app

Proactive problem-solver with expertise in maintaining mission-critical systems, providing comprehensive ICT support, and developing solutions that enhance operational efficiency. Skilled in software, hardware, and network troubleshooting with a proven ability to minimize downtime and support end-users.

Experience

Freelance Full-Stack Developer

January 2025 - Present

Helping small businesses build tools that make their work easier. I recently worked with restaurants and retail shops, creating custom systems that handle their specific needs without the big software price tag.

- ✓ Built a multi-restaurant POS system that lets different businesses run their operations from one platform.
- ✓ Created a stock management system that helped a shop owner track inventory without spreadsheets.
- ✓ Worked directly with business owners to understand what they actually need, not just what they ask for.

Systems Engineer

May 2023 - September 2025

The Luke Commission

Working on everything from hospital software to oxygen plant controls—wherever technology can help people get better care.

- ✓ Designed and manage an Oxygen Plant Dashboard (SCADA Ignition), improving product gas quality through intuitive data visualization.
- ✓ Programmed Siemens PLCs using TIA Portal and integrated Profinet slaves for seamless automation.
- ✓ Debugged and resolved hardware and software issues, ensuring minimal downtime for critical systems.
- ✓ Provided comprehensive ICT support, enhancing operational efficiency for staff.
- ✓ Created custom 3D-printed solutions (camera mounts, orthoses) and replacement parts for broken equipment.

Technical Assistant Intern

March 2022 - December 2022

Ka-Zakhali Private School

Provided ICT support and developed systems to improve administrative efficiency.

- ✓ Developed a custom reporting system for school reports, improving data accuracy and accessibility.
- ✓ Provided ICT support, troubleshooting hardware and software issues for staff and students.

✔ Taught Computer Application Technology to Grade 9-12 students, fostering digital literacy.

Skills

- C++
- ExpressJS
- Git
- Node.js
- Data analysis
- AI-driven problem-solving
- Process optimization
- 3D modeling
- Prototyping
- 3D visualization tools
- Siemens PLC programming
- Profinet integration
- Algorithms
- Data structures
- Peer programming

 **Systems & Networking**

 System Maintenance

 SCADA Ignition

 LAN/WAN, VPNs

 Profinet

 **Software Development**

 Java

 Python

 JavaScript

 Next.js, React

 **Hardware & Solutions**

 Hardware Integration

 3D Printing

 Troubleshooting

 TIA Portal

 **Professional**

 User Support

 Technical Communication

 Team Collaboration

 Continuous Learning

Education

Bachelor of Science in Computer Sciences and Informatics

University of Johannesburg

Graduated December 2020

Projects

Oxygen Plant Dashboard

SCADA Ignition dashboard to monitor and improve oxygen plant operations.

3D-Printed Medical Aids

Custom devices and replacement parts for healthcare settings.

School Reporting System

Custom system for report generation and data accuracy.

AI-Driven Solutions

Applied AI tools to analyze data and optimize processes.

And many more projects. See my full portfolio on my [website](#).

Fluent in English. Passionate about using technology to bridge gaps in healthcare and education, especially in resource-limited settings. Actively engage in self-guided learning on emerging technologies (AI, 3D printing, automation). Enjoy collaborative problem-solving and developing practical solutions. Work samples (code, 3D models, documentation) available upon request.
