

Godliness Dongorere

Systems Support Specialist & Software Developer

+268 7934 2380 godlinessdongorere@gmail.com [linkedin.com/in/gdongorere](https://www.linkedin.com/in/gdongorere) godliness.vercel.app

Proactive problem-solver with expertise in maintaining mission-critical systems, providing comprehensive ICT support, and developing solutions that enhance operational efficiency. Skilled in software, hardware, and network troubleshooting with a proven ability to minimize downtime and support end-users. Experienced in system integration and cross-organizational collaboration with a track record of successful stakeholder engagement. Authorized to work in Eswatini with a valid permit.

TECHNICAL SKILLS

</> Programming

C# Java C++ Python JavaScript TypeScript

🔧 Systems & Integration

System Integration SCADA Ignition Siemens PLC TIA Portal Profinet EMR Systems

🌐 Web & Mobile Development

Node.js Android Studio ExpressJS Next.js React React Native PostgreSQL MongoDB FastAPI Git

🔧 Hardware & Solutions

3D Modeling Hardware Troubleshooting LAN/WAN Networks VPN Configuration System Maintenance
Mobile App Development

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer

January 2025 - Present

Various Clients & Collaborations

- Developed custom business solutions for small enterprises, focusing on operational efficiency and cost reduction
- Built a multi-restaurant POS system enabling centralized management of multiple business operations from a single platform
- Created an inventory management system for retail businesses, eliminating spreadsheet dependency and improving stock tracking accuracy
- Collaborated directly with business owners to translate operational needs into technical specifications
- Worked with cross-functional stakeholders including restaurant managers, retail owners, and accounting personnel

Systems Engineer

May 2023 - September 2025

The Luke Commission

- Managed critical healthcare systems including Electronic Medical Records (EMR) and specialized medical equipment
- Developed and maintained system integrations between medical devices, EMR systems, and operational dashboards
- Managed Oxygen Plant operations both software and hardware:
 - Implemented an Oxygen Plant Dashboard using SCADA Ignition, improving product gas quality through real-time data visualization and system integration
 - Programmed Siemens PLCs using TIA Portal and integrated Profinet slaves for seamless automation control
- Debugged and resolved complex hardware and software issues, ensuring minimal downtime for life-critical systems
- Provided comprehensive ICT support to medical and administrative staff, enhancing operational efficiency
- Created custom 3D-printed medical devices including camera mounts and orthoses, collaborating with clinical teams
- Worked with multiple stakeholders including clinical staff, administrative personnel, and external equipment vendors

Technical Assistant Intern

March 2022 - December 2022

Ka-Zakhali Private School

- Developed a custom reporting system for school reports, addressing data accuracy and accessibility challenges
- Provided comprehensive ICT support, troubleshooting hardware and software issues for staff and students
- Taught Computer Application Technology to Grade 9-12 students, improving digital literacy
- Collaborated with teaching staff, administration, and students to identify and address technical needs

KEY PROJECTS

Oxygen Plant Dashboard

The Luke Commission

Problem Addressed

Lack of centralized monitoring for critical oxygen production equipment affecting product quality and operational efficiency in a healthcare setting.

Solution Implemented

Developed SCADA Ignition dashboard integrating data from multiple sensors and control systems with real-time visualization and alerting capabilities.

Personal Contribution

Led system design, PLC programming, and integration of Profinet devices. Created data visualization interfaces and implemented system integration with existing infrastructure.

Collaboration & Partners

Worked with clinical engineering team, plant operators, medical staff, and international partners to ensure system met operational requirements and compliance standards.

AGT FieldCore - Construction Field Management System

Freelance Project

Problem Addressed

Construction sites needing offline-capable field management with digital accountability and safety compliance in remote locations with poor connectivity.

Solution Implemented

Built an "Offline-First" Progressive Web App (PWA) with local TensorFlow.js for photo analysis and hazard detection, digital signatures for accountability, and QR code asset tracking.

Personal Contribution

Lead Developer & System Architect - Implemented edge AI capabilities, offline data synchronization, PWA optimization, and real-time collaboration features.

Collaboration & Partners

Collaborated with construction site managers, field operators, safety officers, and project stakeholders to ensure system met operational and compliance requirements.

Multi-Restaurant POS System

Collaboration with Carte

Problem Addressed

Independent restaurants needing affordable, centralized management without enterprise software costs and complex licensing.

Solution Implemented

Built custom POS platform supporting multiple business entities with centralized reporting, inventory management, and customer relationship features.

Personal Contribution

Full-stack development using C#, database design, API development, and integration with payment systems and third-party services.

Collaboration & Partners

Partnered with Carte CTO Steven P Selolo, restaurant owners, waitstaff, kitchen managers, and accounting personnel to optimize workflow and system usability.

And many more projects. See my full portfolio on my website - godliness.vercel.app.

EDUCATION

Bachelor of Science in Computer Sciences and Informatics

University of Johannesburg

Graduated December 2020
